Meeting Number: 288 314 341 **Meeting Password:** SVmFqXvm638

Join by Phone: 1-415-655-0003

Having connection issues, contact GLHC at events@gl-hc.org.

Welcome!

Brian Mack
Senior Marketing Strategist

Mary Graham
Manager

Agenda

- MiHIN COVID19 Response
- 2020 Conference Update
- MiHIN/GLHC Integration Update
- Open Forum Q&A

Meeting Information

- Recording and slides will be shared after the meeting.
- Attendees muted
- No video necessary
- Q&A – thank you to all who sent in questions on your registration

COVID-19 RESPONSE

Michigan Health Information Network Shared Services (MiHIN) is working hard to exchange real-time patient data.

Virtual Update Meeting
April 22, 2020

Use Cases

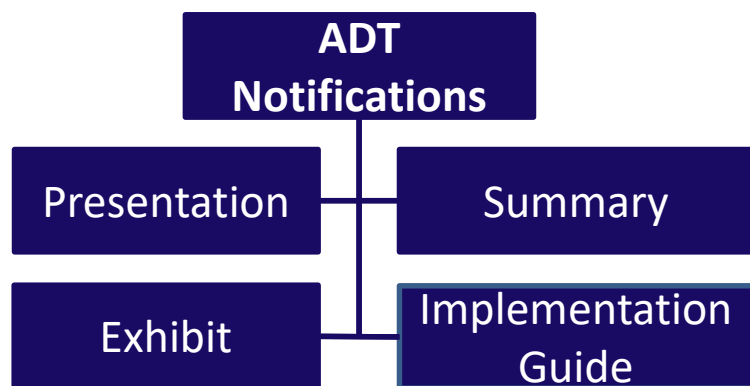

Marty Woodruff
Chief Operating Officer
MiHIN

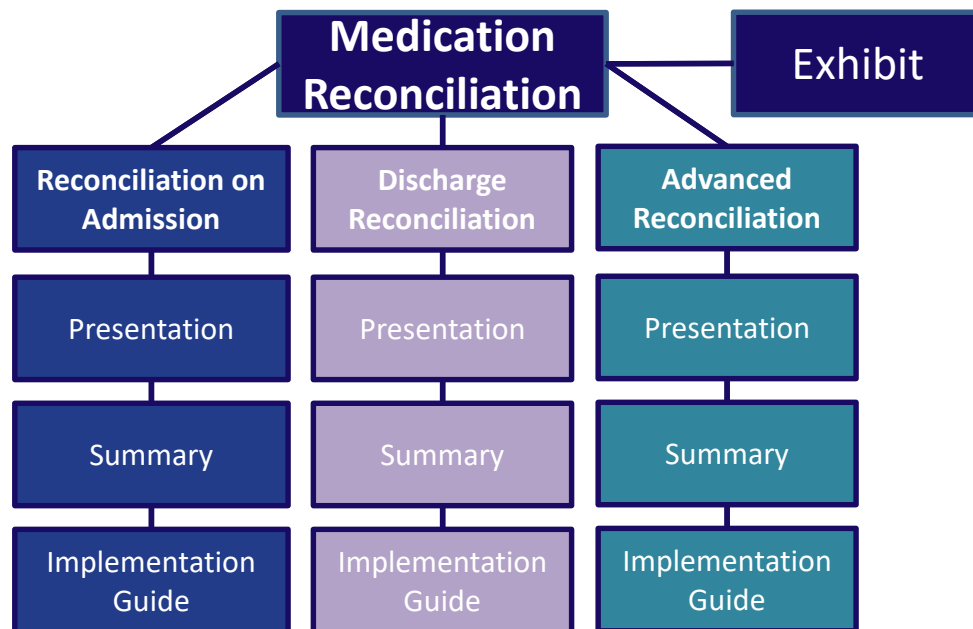

MiHIN's Use Case/Scenario Structure

Master Use Case Agreement (MUCA) Covers All Use Cases

Use case without
additional scenarios

scenarios

Use Case Factory

Adoption

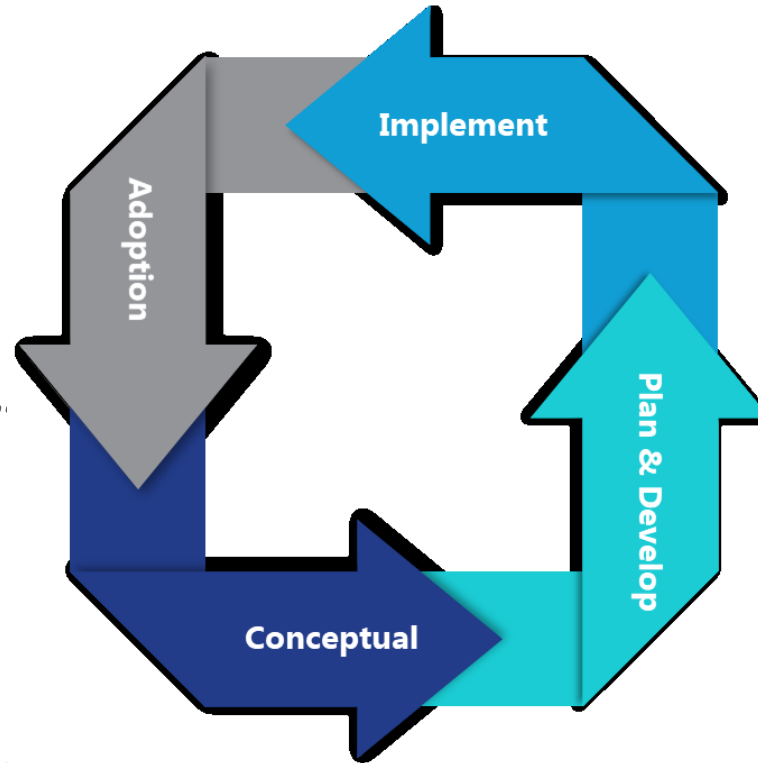

- Critical mass

*Continuous improvement.
Bringing us back to...*

Conceptual

- Define purpose
- Evaluation

Idea with champion, sponsor

Implement

- Production status
- Metrics
- *Mass marketing & outreach*
- *Successful adoption*

Plan & Develop

- Technical planning
- Pilot and refine

*Functional data-sharing widget
...on to the MiHIN Board*

Current Core Use Cases

Active Care Relationship Service[®] (ACRS)

- Connects a patient's electronic health information with the providers "actively caring" for that patient, ensuring coverage of the cost of that patient's care.

Admission, Discharge, Transfer Management (ADTM)

- Notifications are sent when a patient is admitted, transferred to another facility, discharged, or transferred. Notifications are then sent to utilization management teams on a patient's admission, discharge, and transfer transitions, prompting communication among providers, and ensuring continuity of care for patients with multiple or chronic conditions.

Current Core Use Cases

Common Key Service (CKS)

- Improves improve patient identification, data exchange, and care coordination through the use of a network to contribute, a “common key.” This common key is a unique identifier for each patient, stored in our statewide database and shared with all participating organizations. It is linked to external identifiers in their own electronic medical record systems.

Health Directory

- Directory for healthcare providers and organizations, including tracking of all kinds from demographic information, contact addresses, to MiHIN use case participation. It is used for sharing data, to following a potential patient, to identifying practice locations, admitting privileges, medical groups, network affiliations, and more.

Advanced Care Documents (ACD)

- ACD are stored in a specific folder within the LR designated only for those documents. Documents are easily accessible and can be retrieved when needed by those providing care to the patient at any point of care.

Longitudinal Health Record

- A single comprehensive patient record comprised of data from numerous disparate data sources across the healthcare continuum. It is designed to be one record per patient by using comprehensive patient matching logic wrapped in a consent management model. Common Key Service (CKS)

Referrals

- The data exchange in the referral may include, but is not limited to selected and relevant Protected Health Information (PHI) and supporting documentation to expedite the referral process for the individual.

Infrastructure Supporting COVID-19

MiHIN's **Active Care Relationship Service® (ACRS®)** has been turned on for all hospitals across the state of Michigan; for result routing back to the hospitals

In conjunction with the Lab Datalake, MiHIN is placing indicators on the ACRS files marking COVID-19 results, along with reporting date and resulting laboratory

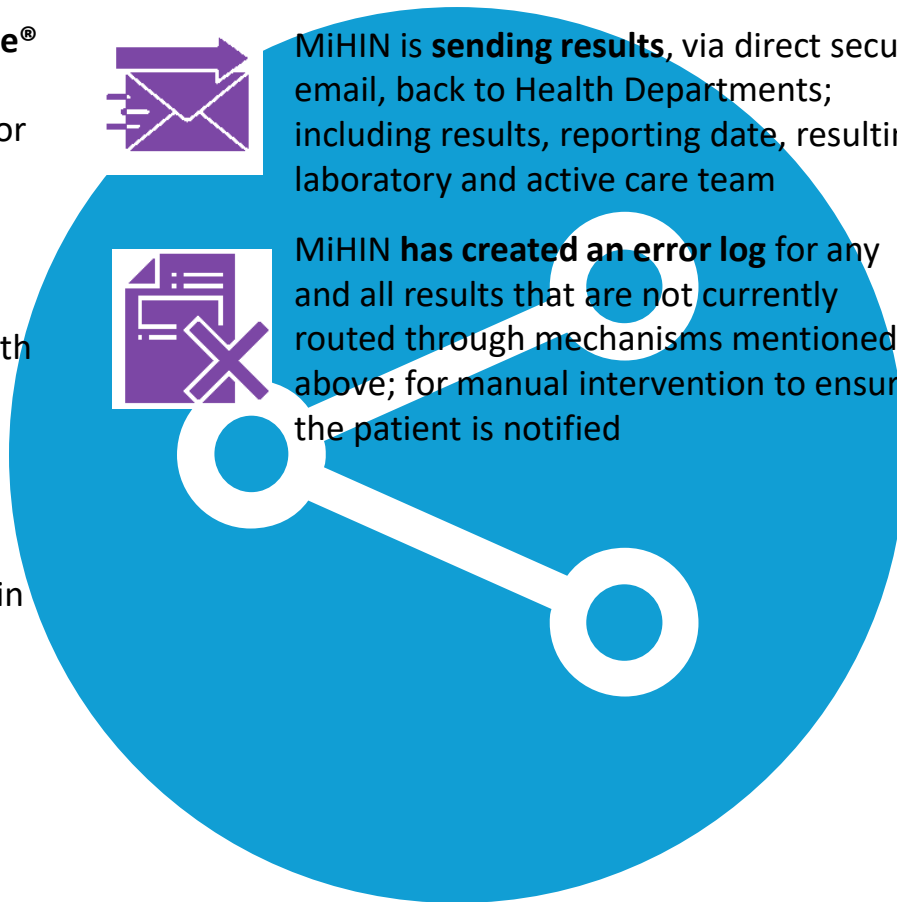

MiHIN is **routing all COVID-19 lab results** to the State of Michigan registry and will route results to all participants in the Statewide Lab Use Case

MiHIN is **sending results**, via direct secure email, back to Health Departments; including results, reporting date, resulting laboratory and active care team

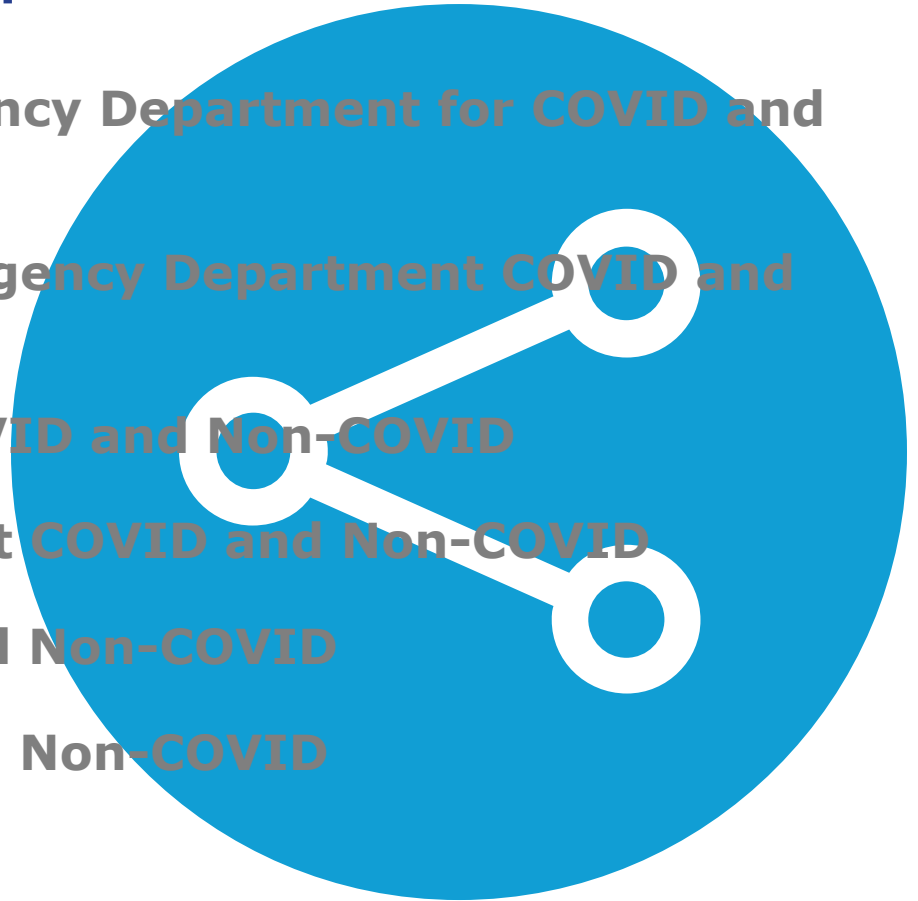

MiHIN **has created an error log** for any and all results that are not currently routed through mechanisms mentioned above; for manual intervention to ensure the patient is notified

Reports

- **Admissions to an Emergency Department for COVID and Non-COVID**
- **Discharges from an Emergency Department COVID and Non-COVID**
- **Admission In-Patient COVID and Non-COVID**
- **Discharge from In-Patient COVID and Non-COVID**
- **ICU Admission COVID and Non-COVID**
- **ICU Discharge COVID and Non-COVID**

Telehealth

Virtual Update Meeting

Senior Product
Marketing Manager
MiHIN

Virtual Update Meeting
April 22, 2020

MiHIN Telehealth Design

- Health Information Exchange plan and infrastructure to support:
 - Care Coordination
 - Transitions of Care
 - Improved Outcomes
 - Communities of Care
 - Public Health
 - Provider initiatives and needs
- HIE now includes Telemedicine modality

Telehealth: The Use Case

Purpose:

- Incorporate telehealth providers and telehealth modalities into Michigan's healthcare delivery ecosystem by utilizing the state's health information network shared services. D
- Drive access, care coordination, increase patient engagement, transition of care, coordinate, align patient initiated virtual visit requests, and support public health priorities

Enable other telehealth platforms to more fully support and participate in:

- Care coordination
- Patient engagement
- Sending virtual visit information to EHR
- HIE statewide use cases
- Promote public health efforts and mandates

Service vs Use Case

Care Convene:

- Is a Service, not a Use Case. (VIPR/Midigate and Bridge will also be services)
- Is a transactional service (place to conduct business)
- Is new space for us! It is a provider and *patient*-facing app.
- Support will be include both Patient and Provider
- Development opportunity for agreement and registration improvements through automation

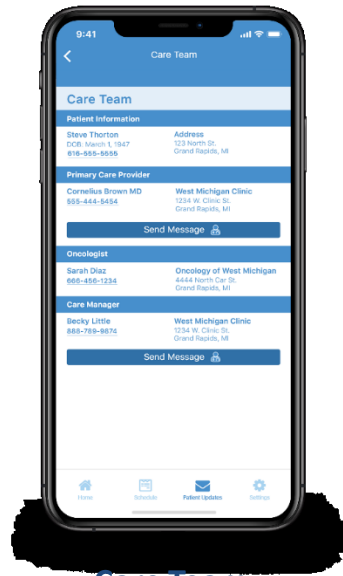

Provider / Practice Access: Web and/or Phone

PROVIDER

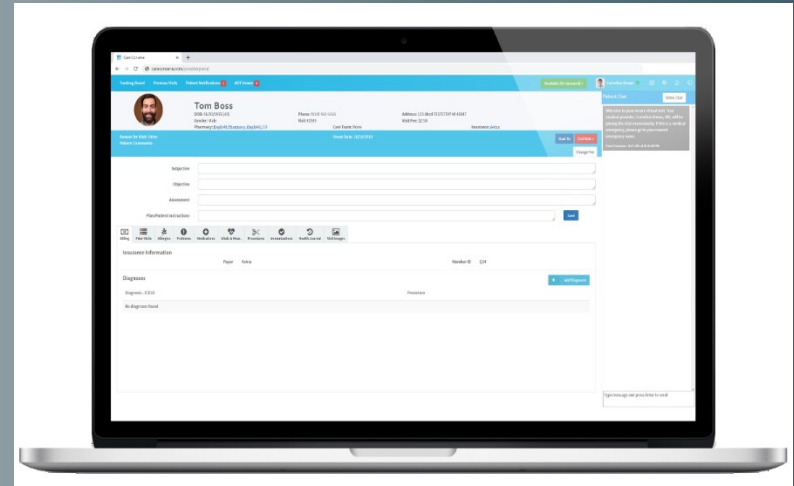

Provider Tracking Board

Care Team Viewer

HIPAA Compliant

Provider Web Portal

Virtual Update Meeting
April 22, 2020

Virtual Practice Based Clinic Model

Allows for

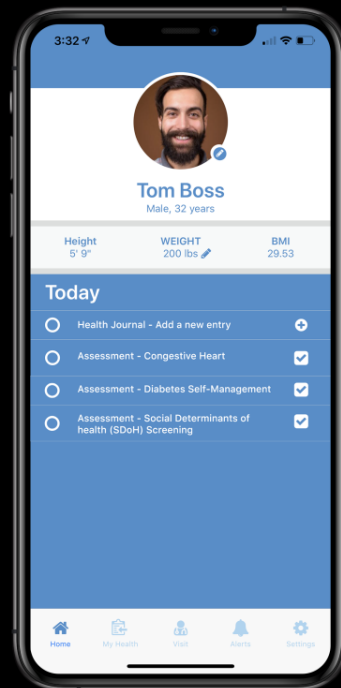

platform

Align principles of PCMH and PDCM

- Closing Gaps in Care
- Patient Self-Management
- Care Management & Coordination
- Social Determinates of Health Reporting

Optimize Health Information Exchange

- Use real-time ADT/CCDA/Results (Problems/Diagnoses/Meds) to support quality longitudinal care and risk stratification
- Chronic Care management, care coordination for high risk
- Post discharge follow-up

Support Greater Patient Health Literacy & Access

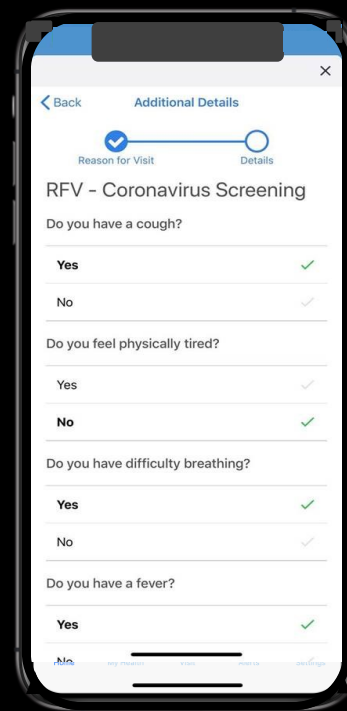

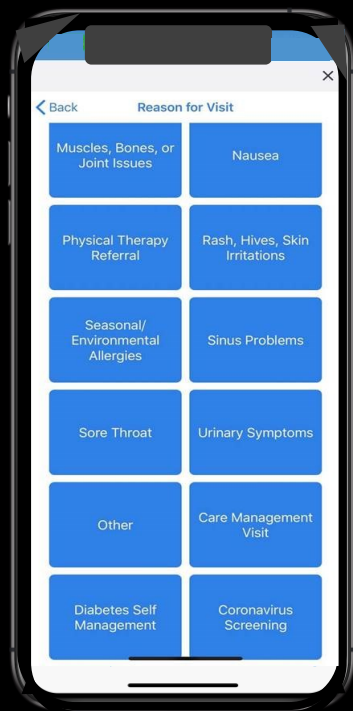

- Poly Chronic Symptom Management.
- Patient Activation using disease specific virtual assessments
- Targeted Patient Education

Platform Benefits

- Longitudinal and Episodic Care
- Scalable and Affordable Pricing
- REST API and FHIR Ready
- Integrated Relationship Health Solution
- Build Relationships over Large Distances
- No upfront platform, license, support, application or maintenance fees

with COVID Symptoms
