Michigan Health Information Network, Velatura Public Benefit Corporation Partner with 3WON to Offer Free Tool to Providers

Tool will allow providers to more easily comply with new CMS interoperability rules

GRAND RAPIDS, Mich. — Michigan Health Information Network Shared Services (MiHIN), Velatura Public Benefit Corporation (Velatura), and 3WON today announced the release of DirettoReg™, a free tool designed to allow community providers and practitioners to quickly submit their digital contact information for the National Plan & Provider Enumeration System (NPPES), therefore making it easier to comply with the Center for Medicare & Medicaid Services (CMS) Final Interoperability Rule.

DirettoReg™ reduces provider organization burden to communicate and register their selected types of endpoints, such as Direct Secure Messaging address, FHIR URL 4.0.1, Connect URL, etc. with the NPPES.

"Creating a simplified mechanism for providers across the country to update their contact and delivery information has been a problem that has confounded the interoperability space for the past few years," said Tim Pletcher, DHA, President and CEO of Velatura and Executive Director of MiHIN. "While states have created successful health or 'provider' directories to store these preferences, there has been a push to move over to a national forum as interstate sharing becomes a key priority for CMS and the Office of the National Coordinator for Health Information Technology (ONC). This tool will enable providers to receive encounter notifications regardless of which delivery format their practice utilizes or regardless of which, if any, health information network or exchange they participate in."

As of March 2021, all Medicare-and-Medicaid-receiving providers are required to update their contact information and delivery preferences in NPPES—one of the first provisions of the CMS Final Interoperability Rule to go into effect.

"Not only will DirettoReg™ promote information sharing to providers who need health care information for a patient at the point of care, it will further support the CMS requirement," said Mike Jurjovec, CEO of 3WON. "Additionally, it will enable providers to attach their patient population, panel, or roster of their patients to submit to any hospital in the Unites States. This secondary function will enable hospitals to send encounter notifications to preidentified members of a patient's care team. This takes the onus off of a patient to remember and communicate with all their providers when they are in a healthcare emergency and allows the provider to submit which patients they want to subscribe in order to receive ADT notifications. We're thrilled to be partnering with MiHIN and Velatura to improve interoperability across the US by offering such an important and timely tool for providers."

DirettoReg™ is the free-of-charge version of MiHIN's more robust secure messaging software, Diretto, which enables patients, providers, specialists, health plans, pharmacists, hospital, and others to securely send and receive protected health information.

The tool is expected to be available for widespread use on June 1, 2021.
