

**Date:** June 24<sup>th</sup>, 2021

**Break Out Session Title:** Clinical Innovation Supporting Value Based Care: Telehealth and Remote Patient Monitoring (RPM)

**Facilitators:** Chris Bailey and Lee Marana

**Summary:** *The landscape of telehealth has changed immensely and changes to remote patient monitoring are happening as well.*

**Key Takeaways:**

- *The future of RPM allows us to intervene as early as possible*
- *The success of RPM is going to be patient buy-in and the retainment of the patient.*
- *Biggest challenges facing both telehealth and RPM are technology, workflow and integration*
- *Interoperability is key with telehealth and RPM – getting information from a patient to a clinician, getting additional information from a patient, etc.*
- *The future of telehealth and RPM are likely rooted in asynchronous communication that relies on AI and machine learning*

**Recommendation(s):**

1. *More payers should reimburse RPM (hoping to see that in coming years)*
2. *Continue to simplify and make integrations to different systems*
