

ABOUT MIHIN

The Michigan Health Information Network Shared Services (MiHIN) is Michigan's state-designated entity for the technical, legal, secure, and private exchange of health information. Breaking down disparate and siloed data systems, the digital network is dedicated to transforming the healthcare experience, improving quality, decreasing cost and solving for health. MiHIN is a 501C3 non-profit, socio-technical collaboration that includes the State of Michigan, Health Information Exchanges, health systems, hospitals, care providers, behavioral health clinics, FQHC's, PIHPs, health plans/payers, pharmacies, post-acute care, hospices, and the Governor's Health Information Technology Commission.

HARNESSING DATA FOR BETTER HEALTH

A neutral steward of data, MiHIN exists to benefit Michigan's population and to serve its network of participants by providing an interoperable ecosystem that can improve population health, reduce healthcare costs, and enhance patient care throughout each community through the exchange of health information.

WHAT DO WE DO FOR MICHIGAN?

More than 17 million messages and pieces of health information get passed through our system each week; messages like admission, discharge and transfer notifications, lab results, immunization updates and more. Our infrastructure is both technical and legal and MiHIN is all patient, provider and payer agnostic.

WHAT DOES THIS MEAN FOR MICHIGAN?

REDUCING THE BURDEN ON PHYSICIANS

Having a complete view of each patient is vital for delivering the best care. At MiHIN, we connect the digital health record systems for healthcare providers so that, regardless of where a patient goes for care, their medical history is accessible to the physicians and healthcare professionals who need it.

EMPOWERING PATIENTS

MiHIN works to legally, securely, and technically ensure that personal health data can be shared in ways which protects privacy and solves for health.

DELIVERING IN REAL TIME

MiHIN specializes in the mobilization of health information across across the continuum of care by getting the right information to the right people at the right time.

SAVING MONEY

Waste in the healthcare system costs the state of Michigan roughly \$20 billion per year, four percent of the state's gross domestic product. Most of this waste comes from inefficiencies or failures in the system, like putting patients through unnecessary services (i.e., duplicative testing), excess administrative costs, or uncoordinated delivery of care.
