## 1. Introduction

### 1.1 Purpose of Use Case

*This pilot activity exhibit (PAE) begins to document the social care process from community generated sources with social needs screening data.*

This use case begins to document the social care process from community generated sources with social needs screening data. Participating organizations screen patients in community settings for social need identification. This data is submitted to the Health Information Network (HIN), integrated with Active Care Relationship Services (ACRS)<sup>™</sup> and Common Key (CK)<sup>™</sup> to allow for accurate person-care team relationships to be identified. This creates individual social need identifiers which can be used to move the individual level data to appropriate Clinical Quality Initiatives (CQIs).

### 1.2 Message Content

For this Use Case, Message Content means a .csv file containing social need screening and patient information. Based on MiHIN's social needs screening (SDOH) file specification.

Message content transmitted under this use case will solely be used for the purpose of Clinical Quality Initiatives (CQI) activities during the term of 9-1-2022 to 9-1-2024.

# 1.3 Data Flow and Actors

## 1.3.1 Data Flow

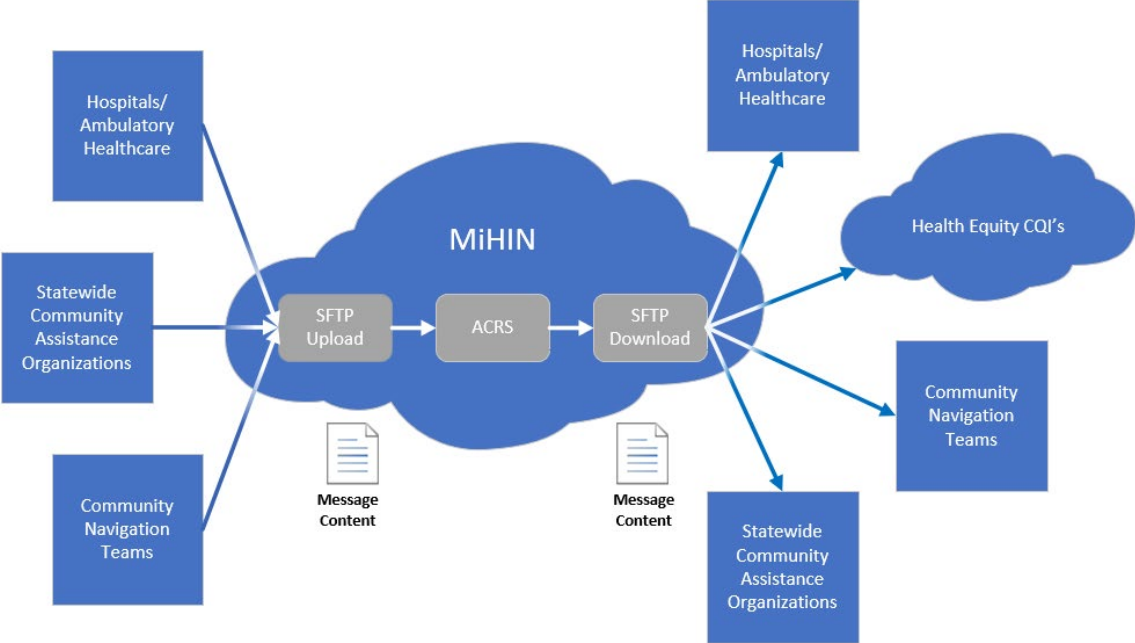

Figure 1. Data flow to send and receive social needs screening (SDOH) data.

### Data Submission to MiHIN

1. The Organization submitting the social needs screening (SDOH) data sends a CSV file to MiHIN via Secure File Transfer Protocol (SFTP).
  - a. Files may be submitted at any time and are processed automatically on a rolling basis.
2. MiHIN validates the file and triggers an email to the submitter with validation outcome (no errors, errors found could not be loaded) and error details if found.
3. MiHIN loads any rows without error and stores data in the ACRS® (Active Care Relationship Service®) database.
4. MiHIN delivers SDOH social needs screening data to receivers as a CSV file via SFTP based on ACRS ®.

### Data Validation

1. Data is validated based on the file specification. See Section 4 Specifications.

- a. The file specification of the submission is determined based on the headers in the file.
2. The file submitter receives an email notification with the file validation outcome (no errors, errors found, or file could not be loaded) with list of error details if found or formatting issue if the file could not be loaded.
3. Any valid rows will be loaded. If there are any rows with errors, the errors may be corrected, and those rows resubmitted separately or along with the valid rows from original submission. If the entire file could not be loaded, then the format errors must be corrected and the entire file resubmitted.

### Data Delivered to CQI

1. SDoH social needs screening CSV is parsed, and each row is compared with ACRS® for relationships.
2. Patients with community generated screening data and with a relationship to a provider are matched using ACRS® and will include a CK®.
3. Data then moves to the appropriate CQI that provider is associated with.

All CQI associated patients are packaged together and delivered to the associated CQI.

#### 1.3.2 Actors

- *Actor: health Care Generated Data Submitter*
  - *Role:* Collects and compiles screening needs data into a .csv file and submits via a Secure File Transfer Protocol (sFTP)
- *Actor: Community Generated Data Submitted*
  - *Role:* Generates and submits social needs screening data into a .csv file and submits via a Secure File Transfer Protocol (sFTP)
- *Actor: HIN*
  - *Role:* Receives and process SDOH .CSV file and ingests them into SDOH database. Filters patients through ACRS and finds matches within organization's ACRS patient populations. Compiles a .csv file of matched patients and routes to a Secure File Transfer Protocol (sFTP) folder for receive organization based on OID information.
- *Actor: Health Equity CQI*
  - *Role:* Submits ACRS files to HIN, listing individuals for which they are looking for screening data and receives screening data based on matches to their ACRS file.

You can contact MiHIN at [www.mihin.org/requesthelp](http://www.mihin.org/requesthelp) for more information.

## 2 Onboarding

### 2.1 Prerequisites

Participating organizations should begin two parallel onboarding tracks simultaneously:

- Obtain, review, and execute legal agreements, and
- Establish technical transport and testing.

#### *2.1.1 Universal Legal Prerequisites*

Legal agreements for organizations who are onboarding for the first-time consist of a Data Sharing Organization Agreement, a Master Use Case Agreement, and Use Case Exhibits for any applicable use cases.

Once an organization signs the Master Use Case Agreement, only a new Pilot Activity Exhibit is required for this activity.

To initiate the legal onboarding contact, email [legal@mihin.org](mailto:legal@mihin.org).

#### *2.1.2 Social Determinants of Health Prerequisites*

Participation in the Social Determinants of Health – Community (SDOH) use case requires participation in the following use cases/services/products:

- *ACRS Use Case*
- *Common Key Service Use Case*
- *Health Directory*

## 2.2 Implementation of Social Needs Screening (SDOH) Data

### 2.2.1 Social Needs Screening (SDOH) Data Sender Onboarding Process

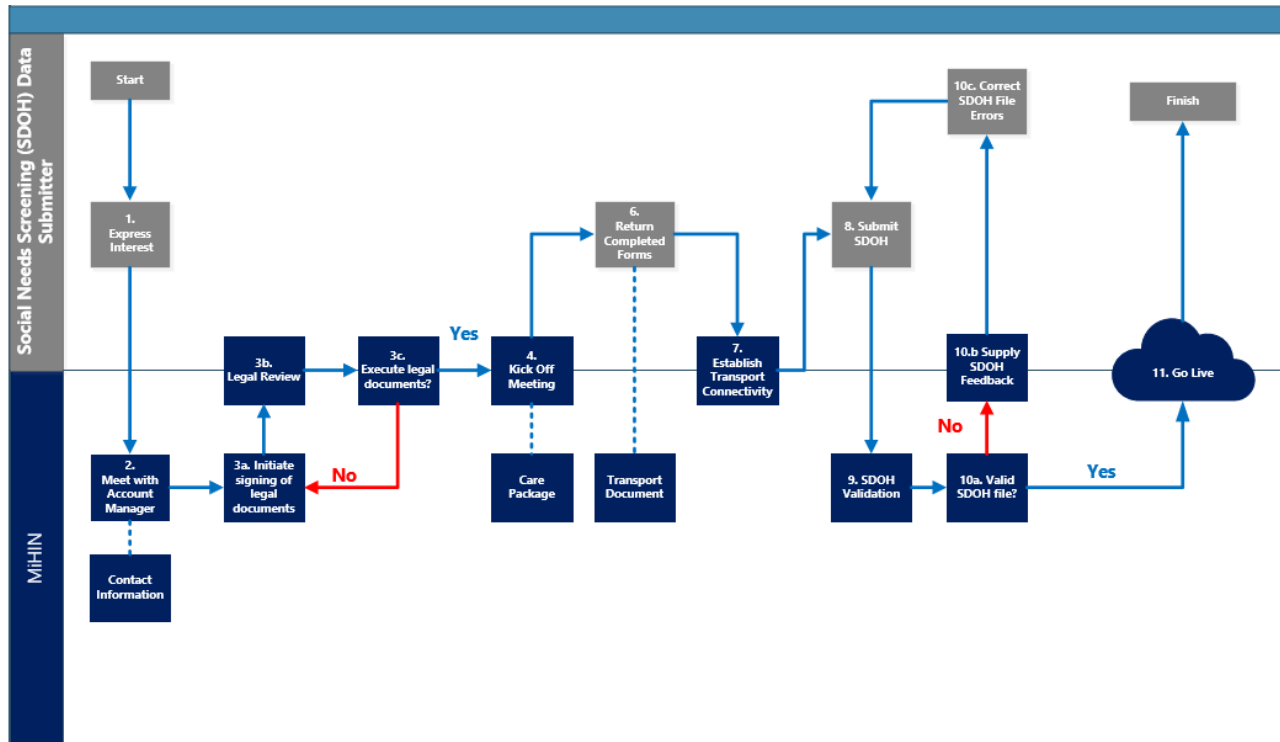

Figure 2. MiHIN Social Needs Screening (SDOH) Data Submitter Onboarding Workflow

For participating organizations who will be submitting Social Determinants of Health csv files, onboarding steps are as follows:

- Express interest in participating in the use case
- Meet with Account Manager
  - Exchange contact information
- Initiate signing of legal documents
- Legal Review
- Execute legal documents
  - Participation Agreement
  - Exhibit A - Business Associate Agreement
  - SDOH for CBO Product Selection on Legal Portal (Inclusive of ACRS, CKS, HPD, and SDOH for CBO Use Cases)
- Kick-Off Meeting
  - Distribute Social Needs Screening (SDOH) Data Care Package
- Exchange required documents.
  - Transport Document (SFTP Request Form)

- OID Request Form (if needed)
- Social Needs Screening (SDOH) Data Spec Sheet (provided on MiHIN website)
- Establish Transport Connectivity
- Submit Initial Social Needs Screening (SDOH) Data file
- SDOH File Validation
  - If valid, proceed to Go-Live
  - If invalid, MiHIN provides error feedback and submitter makes corrections and resubmits.
- Go-Live

### 2.2.2 Social Needs Screening (SDOH) Data Receiver Onboarding Process

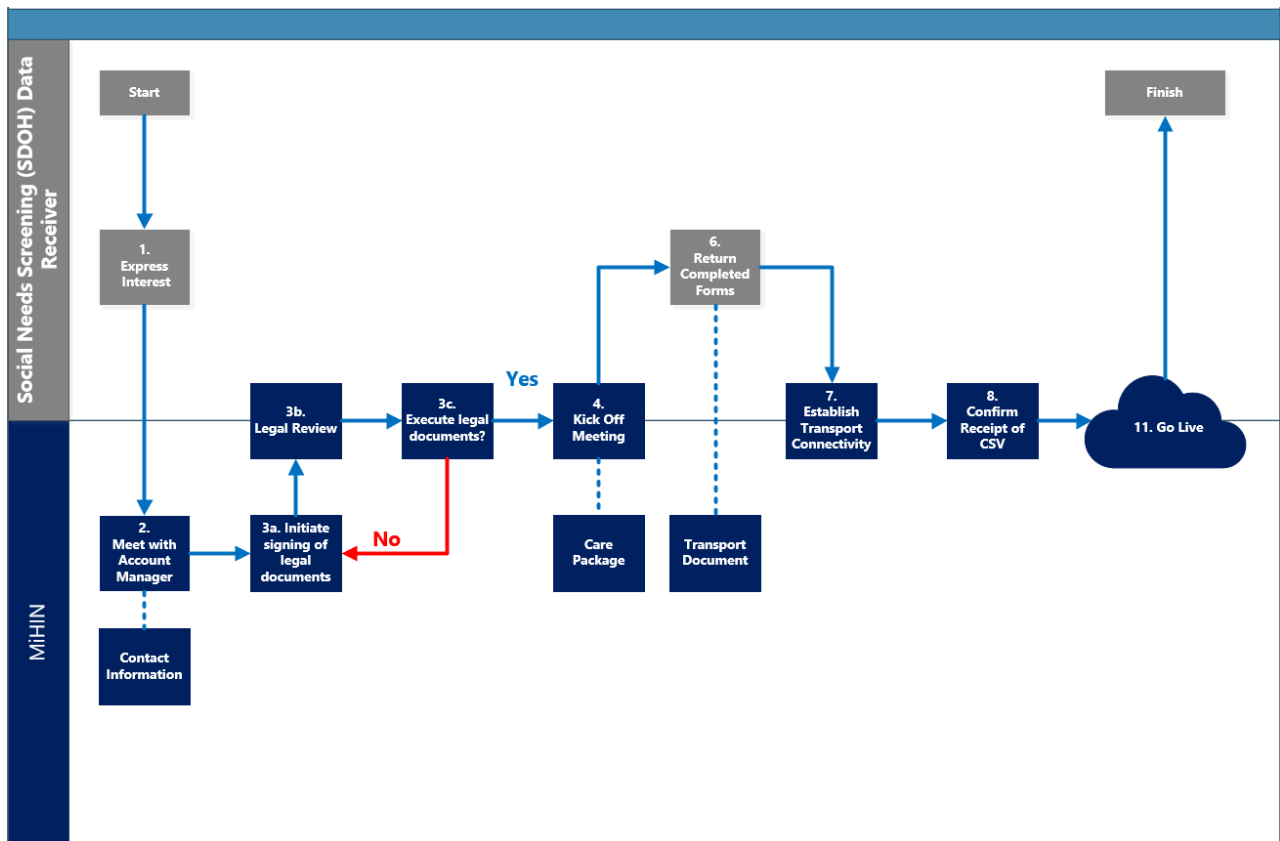

Figure 3. MiHIN Social Needs Screening (SDOH) Data Receiver Onboarding Flowchart

For participating organizations who will be receiving Social Determinants of Health csv files, onboarding steps are as follows:

- Express interest in participating in the use case
- Meet with Account Manager
  - Exchange contact information
- Initiate signing of legal documents
- Legal Review

- Execute legal documents
  - Participation Agreement
  - Exhibit A - Business Associate Agreement
  - SDOH for CBO Product Selection on Legal Portal (Inclusive of ACRS, CKS, HPD, and SDOH for CBO Use Cases)
- Kick-Off Meeting
  - Distribute Social Needs Screening (SDOH) Data Care Package
- Exchange required documents.
  - Transport Document (SFTP Request Form)
  - OID Request Form (if needed)
  - Social Needs Screening (SDOH) Data Spec
- Establish Transport Connectivity
- Confirm receipt of Social Needs Screening (SDOH) Data ACRS match .csv file
- Go-Live

### *2.2.3 Social Needs Screening (SDOH) Data Technical Connectivity Process*

HIN considers itself “transport agnostic” and offers multiple options for organizations to establish technical connectivity to transport data to HIN. Organizations should select one or more connectivity methods for message transport based on their technical capabilities and should communicate the selection(s) to [www.mihin.org/requesthelp](http://www.mihin.org/requesthelp) early in the onboarding process. Currently the ONLY transport methods the HIN accepts are:

- HIE Platform SFTP – Secure File Transfer Protocol hosted by MiHIN

Additional transport methods may be added in the future. These can include NWHIN, XCA, REST/RESTFUL APIs, FHIR, and others.

The following steps describe the technical onboarding process. However, MiHIN typically conducts “onboarding kickoff” meetings with new organizations to go through each of these steps in detail and answer any questions.

1. The organization selects one or more supported transport methods and establishes connectivity with MiHIN. This step varies based on the method selected.
  - a. HIE Platform SFTP – Secure File Transfer Protocol hosted by MiHIN
2. All connectivity testing, regardless of whether it is for Social Needs Screening (SDOH) Data Sender or Receiver data flows are accomplished through the transfer of files via SFTP folder and confirmation of receipt. Unless otherwise requested, all testing communications can be done via email.

- a. In the case of senders, test or production csv files are loaded to the Social Needs Screening (SDOH) submission folder, and the HIN confirms receipt and pickup of the file.

In the case of receivers, test or production .csv files are uploaded to the organization SFTP folder, and the organization confirms receipt of those files.

## 4 Specifications

### 4.1 Message Example

For an example of what a properly formatted .csv should look like for this use case, refer to the file specification found on the <https://mihin.org/social-determinants-of-health-use-case/>.

The following list shows examples of the type of information that will be received by MiHIN and sent to the State of Michigan.

- Participating Organization Name
- Participating Organization Unique ID (OID)
- Patient First Name
- Patient Last Name
- Patient Date of Birth
- Patient Gender
- Patient Address
- SDOH Screening Date
- SDOH Screening Practice Name
- SDOH Screening Practice Organization - Unique ID (OID)
- SDOH Screening Question Responses
- SDOH Screening Question Tracking Statuses

### 4.2 Message Trigger Events

Sending organizations will deliver message content to MiHIN at least monthly, with the goal of increasing the frequency of submissions. Social needs screening data is matched and delivered to receivers as file submissions are received and processed by MiHIN.

### 4.3 File Specification Information

Organizations may submit data using either Version 2 Enhanced or Version 3.0 SDOH specifications. Please refer to the MiHIN website for all SDOH specifications: <https://mihin.org/social-determinants-of-health-use-case/> If you have questions about which specifications your organization should use, please contact the Help Desk: [help@mihin.org](mailto:help@mihin.org).

# 5 Troubleshooting

## 5.1 Production Support

A list of common questions regarding the Electronic Case Reporting Use Case can be found at: <https://mihin.org/social-determinants-of-health-use-case/>.

If you have questions, please contact the MiHIN Help Desk:

- [www.mihin.org/requesthelp](http://www.mihin.org/requesthelp)
- Phone: 517-336-1430
- Monday – Friday 8:00 AM – 5:00 PM (Eastern Standard Time)

# 6 Legal Advisory Language

This reminder applies to all Use Case Exhibits (UCEs) or Pilot Activity Exhibits (PAEs) covering the exchange of electronic health information:

The data sharing agreement establishes the legal framework under which Participating Organization (PO) can exchange messages through the Michigan Health Information Network Shared Services Platform, and sets forth the following approved reasons for which messages may be exchanged:

- a. By healthcare providers for Treatment, Payment and/or Healthcare Operations consistent with the requirements set forth in Health Insurance Portability and Accountability Act (HIPAA);
- b. Public health activities and reporting as permitted by HIPAA and other Applicable Laws and Standards;
- c. To facilitate the implementation of “promoting interoperability” criteria as specified in the American Recovery and Reinvestment Act of 2009 and as permitted by HIPAA;
- d. Uses and disclosures pursuant to an Authorization provided by the individual who is the subject of the Message or such individual’s personal representative in accordance with HIPAA;
- e. By Data Sharing Organizations for any and all purposes, including but not limited to pilot programs and testing, provided that such purposes are consistent with Applicable Laws and Standards; and
- f. **For any additional purposes as specified in any UCE or PAE, provided that such purposes are consistent with Applicable Laws and Standards.**

Under these agreements, “**Applicable Laws and Standards**” means all applicable federal, state, and local laws, statutes, acts, ordinances, rules, codes, standards, regulations and judicial or administrative decisions promulgated by any governmental agency, including the

State of Michigan, or the Michigan Health Information Technology Commission as any of the foregoing may be amended, modified, codified, reenacted, promulgated or published, in whole or in part, and in effect from time to time which is enforceable against a Party. Without limiting the generality of the foregoing, “Applicable Laws and Standards” includes HIPAA “; the federal Confidentiality of Alcohol and Drug Abuse Patient Records statute, section 543 of the Public Health Service Act, 42 U.S.C. 290dd-2, and its implementing regulation, 42 CFR Part 2; the Michigan Mental Health Code, at MCLA §§ 333.1748 and 333.1748a; and the Michigan Public Health Code, at MCL § 333.5131, 5114a.

**It is each PO’s obligation and responsibility to ensure that it is aware of Applicable Laws and Standards as they pertain to the content of each message sent, and that its delivery of each message complies with the Applicable Laws and Standards. This means, for example, that if a UCE is directed to the exchange of physical health information that may be exchanged without patient authorization under HIPAA, the PO must not deliver any message containing health information for which an express patient authorization or consent is required (e.g., mental or behavioral health information).**

**Disclaimer:** The information contained in this implementation guide was current as of the date of the latest revision in the Document History in this guide. However, Medicare and Medicaid policies are subject to change and do so frequently. HL7 versions and formatting are also subject to updates. Therefore, links to any source documents have been provided within this guide for reference. MiHIN will apply its best efforts to keep all information in this guide up-to-date. It is ultimately the responsibility of the PO and Sending Facilities to be knowledgeable of changes outside of MiHIN’s control.

# Definitions

**Attribution.** The connection between a consumer and their healthcare providers. One definition of attribution is “assigning a provider or providers, who will be held accountable for a member based on an analysis of that member’s claim data.” The attributed provider is deemed responsible for the patient’s cost and quality of care, regardless of which providers actually deliver the service.

**Active Care Relationship (ACR).** (a) For health providers, a patient who has been seen by a provider within the past 24 months, or is considered part of the health provider’s active patient population they are responsible for managing, unless notice of termination of that treatment relationship has been provided to Michigan Health Information Network Shared Services (MiHIN); (b) for payers, an eligible member of a health plan;(c) an active relationship between a patient and a health provider for the purpose of treatment, payment and/or healthcare operations consistent with the requirements set forth in Health Insurance Portability and Accountability Act (HIPAA); (d) a relationship with a health provider asserted by a consumer and approved by the health provider; or (e) any person or Trusted Data Sharing Organization authorized to receive message content under an exhibit which specifies that an Active Care Relationship (ACR) may be generated by sending or receiving message content under that exhibit. ACR records are stored by MiHIN in the Active Care Relationship Service.

**Active Care Relationship Service® (ACRS®).** The Michigan Health Information Network Shared Services infrastructure service that contains records for Trusted Data Sharing Organizations, their participating organizations participants or any health providers who have an active care relationship with a patient.

**Admission, Discharge, Transfer (ADT).** An event that occurs when a patient is admitted to, discharged from, or transferred from one care setting to another care setting or to the patient’s home. For example, an Admission, Discharge, Transfer (ADT) event occurs when a patient is discharged from a hospital. An ADT event also occurs when a patient arrives in care setting such as a health clinic or hospital.

**ADT Message.** A type of Health Level Seven® (HL7®) message generated by healthcare systems based upon Admission, Discharge, Transfer (ADT) events and the HL7 “*Electronic Data Exchange in Healthcare*” standard. The HL7 ADT message type is used to send and receive patient demographic and healthcare encounter information, generated by source system(s). The ADT messages contain patient demographic, visit, insurance, and diagnosis information.

**ADT Notification.** An electronic notification that a given patient has undergone an Admission, Discharge, Transfer (ADT) event. An ADT Notification is not a complete ADT Message.

**Advance Directive.** A document in which consumers specify what type of medical care they want in the future, or who should make medical decisions if they become unable to make decisions for themselves.

**Applicable Laws and Standards.** In addition to the definition set forth in the Data Sharing Agreement, the federal Confidentiality of Alcohol and Drug Abuse Patient Records statute, section 543 of the Public Health Service Act, 42 U.S.C. 290dd-2, and its implementing regulation,

42 CFR Part 2; the Michigan Mental Health Code, at MCLA §§ 333.1748 and 333.1748a; and the Michigan Public Health Code, at MCL § 333.5131, 5114a.

**C32.** Healthcare Information Technology Standards Panel Summary Documents Using Health Level Seven® Continuity of Care Document Component - [http://www.hitsp.org/ConstructSet\\_Details.aspx?&PrefixAlpha=4&PrefixNumeric=32](http://www.hitsp.org/ConstructSet_Details.aspx?&PrefixAlpha=4&PrefixNumeric=32).

**C62.** The Healthcare Information Technology Standards Panel Unstructured Document Component is provided for the capture and storage of patient identifiable, unstructured document content, such as text, PDF, and images rendered in PDF. It is based on the Cross-Enterprise Sharing of Scanned Documents (XDS-SD) profile from Integrating the Healthcare Enterprise - [http://www.hitsp.org/ConstructSet\\_Details.aspx?&PrefixAlpha=4&PrefixNumeric=62](http://www.hitsp.org/ConstructSet_Details.aspx?&PrefixAlpha=4&PrefixNumeric=62)

**C83.** The Healthcare Information Technology Standards Panel (HITSP) Clinical Document Architecture (CDA) Content Modules Component. The CDA Content Modules Component defines the content modules for document based HITSP constructs utilizing clinical information- [http://www.hitsp.org/ConstructSet\\_Details.aspx?&PrefixAlpha=4&PrefixNumeric=83](http://www.hitsp.org/ConstructSet_Details.aspx?&PrefixAlpha=4&PrefixNumeric=83)

**Caregiver.** An individual such as a health professional or social worker who assists in the identification, prevention or treatment of an illness or disability.

**Clinical Document Architecture (CDA).** A message structure that uses XML and is made up of Templates and Profiles with RIM attributes and codes. One of the main advantages to using XML is the human readable structure.

**Clinical Quality Indicators (CQI).** Organizations that work collaboratively with care providers to collect data to a centralized registry, analyze the data and share information to identify processes that can help improve health outcomes and guide quality improvement interventions as aligned with the Institute for Healthcare Policy and Innovation (IHPI)

**Common Gateway.** The method by which data is sent and received by Michigan Health Information Network Shared Services using various national standard protocols (e.g., NwHIN SOAP, IHE XCA, IHE XDS.b).

**Conforming Message.** A message that is in a standard format that strictly adheres to the implementation guide for its applicable use case.

**CONNECT.** An open source software solution that supports health information exchange – both locally and at the national level. CONNECT uses Nationwide Health Information Network standards and governance to make sure that health information exchanges are compatible with other exchanges being set up throughout the country (<http://www.connectopensource.org/>). This software solution was initially developed by federal agencies to support their health-related missions, but it is now available to all organizations and can be used to help set up health information exchanges and share data using nationally-recognized interoperability standards.

**Critical Access Hospital (CAH).** A Critical Access Hospital as defined under the Medicaid Electronic Health Record Incentive Program.

**Data Sharing Agreement.** Any data sharing organization agreement signed by both Michigan Health Information Network Shared Services (MiHIN) and a participating organization. Data sharing organization agreements.

**DS Message.** A message specific to the document submission (DS) specification that conforms in content and format to the Integrating the Healthcare Enterprise's Cross-enterprise Document Reliable Interchange specification.

**EdgeSim.** Simulators that are utilized in a testing environment to simulate testing with a data sharing organization.

**eHealth Exchange.** See the definition for The Sequoia Project.

**Electronic Address.** A string that identifies the transport protocol and end point address for communicating electronically with a recipient. A recipient may be a person, organization or other entity that has designated the electronic address as the point at which it will receive electronic messages. Examples of an electronic address include a secure email address (Direct via secure Simple Mail Transfer Protocol) or secure URL (SOAP/XDR/REST/FHIR). Communication with an electronic address may require a digital certificate or participation in a trust bundle.

**Electronic CQM (eCQM).** Clinical Quality Measure that are specified in a standard electronic format and are designed to use data from health information technology systems for measurement.

**Electronic Medical Record or Electronic Health Record (EMR/EHR).** A digital version of a patient's paper medical chart.

**Electronic Service Information (ESI).** All information reasonably necessary to define an electronic destination's ability to receive and use a specific type of information (e.g., discharge summary, patient summary, laboratory report, query for patient/provider/healthcare data). Electronic Service Information (ESI) may include the type of information (e.g., patient summary or query), the destination's electronic address, the messaging framework supported (e.g., SMTP, HTTP/SOAP, XDR, REST, FHIR), security information supported or required (e.g., digital certificate) and specific payload definitions (e.g., CCD C32 V2.5). In addition, ESI may include labels that help identify the type of recipient (e.g., medical records department).

**Eligible Hospital (EH).** An Eligible Hospital as defined under the Medicare and Medicaid Electronic Health Record Incentive Programs.

**Eligible Professional (EP).** An Eligible Professional as defined under the Medicare and Medicaid Electronic Health Record Incentive Programs.

**End Point.** An instance of an electronic address or ESI.

**Exhibit.** Collectively, a use case exhibit or a pilot activity exhibit.

**FedSim.** Simulators that are utilized in a testing environment to simulate testing with a federal partner e.g., Social Security Administration or U.S. Department of Veterans Affairs.

**Health Directory.** The statewide shared service established by Michigan Health Information Network Shared Services that contains contact information on health providers, electronic addresses, end points, and ESI, as a resource for authorized users to obtain contact information and to securely exchange health information.

**Health Level Seven® (HL7®).** An interface standard and specifications for clinical and administrative healthcare data developed by the Health Level Seven organization and approved by the American National Standards Institute (ANSI). HL7 provides a method for disparate systems to

communicate clinical and administrative information in a normalized format with acknowledgement of receipt

**Health Information.** Any information, including genetic information, whether oral or recorded in any form or medium, that (a) is created or received by a health provider, public health authority, employer, life insurer, school or university, or healthcare clearinghouse; and (b) relates to the past, present, or future physical or mental health or condition of an individual; the provision of healthcare to an individual; or the past, present, or future payment for the provision of healthcare to an individual.

**Health Information Network (HIN).** An organization or group of organizations responsible for coordinating the exchange of protected health information in a region, state, or nationally.

**Health Plan.** An individual or group plan that provides, or pays the cost of medical care (as “group health plan” and “medical care” are defined in section 2791(a)(2) of the Public Health Service Act, 42 U.S.C. 300gg-91(a)(2)). Health plan further includes those entities defined as a health plan under HIPAA, 45 C.F.R 160.103.

**Health Professional.** Means (a) any individual licensed, registered, or certified under applicable Federal or State laws or regulations to provide healthcare services; (b) any person holding a nonclinical position within or associated with an organization that provides or coordinates healthcare or healthcare related services; and (c) people who contribute to the gathering, recording, processing, analysis or communication of health information. Examples include, but are not limited to, physicians, physician assistants, nurse practitioners, nurses, medical assistants, home health professionals, administrative assistants, care managers, care coordinators, receptionists and clerks.

**Health Provider.** Means facilities/hospitals, health professionals, health plans, caregivers, pharmacists/other qualified professionals, or any other person or organization involved in providing healthcare.

**ICD-10.** Diagnosis codes is the 10th revision of the International Statistical Classification of Diseases and Related Health Problems, a medical classification list by the World Health Organization.

**Immunization Information System (IIS).** A registry that stores immunization records.

**Information Source.** Any organization that provides information that is added to a Michigan Health Information Network Shared Services infrastructure service.

**Integrating the Healthcare Enterprise.** An initiative by healthcare professionals and industry to improve the way computer systems in healthcare share information (<http://www.ihe.net/>). Integrating the Healthcare Enterprise (IHE) promotes the coordinated use of established standards such as DICOM and Health Level Seven® to address specific clinical needs in support of optimal patient care. Systems developed in accordance with IHE communicate with one another better, are easier to implement, and enable care providers to use information more effectively. The Nationwide Health Information Network specifications utilize underlying IHE specifications for various services for health data exchange

**LOINC.** Logical Observation Identifiers Names and Codes is a database and universal standard for identifying medical laboratory observations.

**Master Use Case Agreement (MUCA).** Legal document covering expected rules of engagement across all use cases. Trusted data sharing organizations sign master use case agreement one time, then sign use case exhibits for participation in specific use cases.

**Message.** A mechanism for exchanging message content between the participating organization to Michigan Health Information Network Shared Services, including query and retrieve.

**Message Content.** Information, as further defined in an Exhibit, which is sent, received, found or used by a participating organization to or from Michigan Health Information Network Shared Services. Message content includes the message content header.

**Message Header (“MSH”) or Message Content Header.** The Message Header segment present in every Health Level Seven® (HL7®) message type that defines the Message’s source, purpose, destination, and certain syntax specifics such as delimiters (separator characters) and character sets. It is always the first segment in the HL7 message, with the only exception being HL7 batch messages.

**Michigan Care Improvement Registry (MCIR).** The Immunization Information System for the State of Michigan operated by the Michigan Department of Health and Human Services.

**Michigan Health Information Network Shared Services.** The health information network for the State of Michigan.

**MiHIN Infrastructure Service.** Certain services that are shared by numerous use cases. Michigan Health Information Network Shared Services infrastructure services include, but are not limited to, Active Care Relationship Service®, Health Directory, Statewide Consumer Directory, and the Medical Information Direct Gateway (MIDIGATE®).

**MiHIN Services.** The Michigan Health Information Network Shared Services (MiHIN) infrastructure services and additional services and functionality provided by MiHIN allowing the participating organizations to send, receive, find, or use information to or from MiHIN as further set forth in an exhibit.

**Merit-Based Incentive Payment System.** The program that will determine Medicare payment adjustments. Using a composite performance score, eligible clinicians (ECs) may receive a payment bonus, a payment penalty or no payment adjustment.

**Nationwide Health Information Network (NwHIN).** See the definition for The Sequoia Project.

**Nationwide Health Information Organizations (NHIO).** Nodes on the eHealth Exchange that use the Nationwide Health Information Network web services to facilitate exchange of information with other nodes in the network.

**NwHIN Authorization Framework Specification.** The purpose of this specification is to define the required exchange of information describing the initiator of a request between Health Information Organizations participating in the eHealth Exchange network. This enables a responding Nationwide Health Information Organizations (NHIO) to evaluate the request based on the initiating NHIOs assertions and its own local policies and permissions.

**NwHIN Document Submission (DS) Web Service Interface Specification.** The purpose of this specification is to provide the ability to “send” data for a given patient from an exchange partner to a health information exchange using configuration on the sender side.

**NwHIN Gateway.** An implementation of the Nationwide Health Information Network specified web service interfaces. These web service interfaces communicate over secured Hypertext Transfer Protocol Secure using Public Key Infrastructure supported by the Nationwide Health Information Network Operational Infrastructure.

**NwHIN Interface.** An implementation of the Nationwide Health Information Network (NwHIN) specified web service interfaces. These web service interfaces communicate over secured Hypertext Transfer Protocol Secure using Public Key Infrastructure supported by the NwHIN Operational Infrastructure.

**NwHIN Messaging Platform Specifications.** The purpose of this specification is to define a base set of messaging standards and web service protocols which must be implemented by each node in the eHealth Exchange network and applies to all eHealth Exchange transactions.

**NwHIN Patient Discovery Web Service Interface Specification.** The purpose of this specification is to define the mechanism by which one eHealth Exchange node can query another to reciprocally establish patient identity and to determine if a node may be a source of information for a specific patient.

**NwHIN Query for Documents Web Service Interface Specification.** The purpose of this specification is to define the mechanism by which an initiating eHealth Exchange node can request a patient-specific list of available documents from a responding node using the patient ID obtained by a prior Patient Discovery transaction.

**NwHIN Retrieve Documents Web Service Interface Specification.** The purpose of this specification is to define the mechanism by which an Initiating eHealth Exchange node can retrieve specific documents from a responding node using the Document Reference IDs obtained using a prior Query for Documents transaction.

**Negative Acknowledgment (NAK or NACK).** “Not acknowledged” and is used to negatively acknowledge or to reject previously received message content or to indicate some kind of error.

**Notice.** A message transmission that is not message content and which may include an acknowledgement of receipt or error response, such as an Acknowledged or Not Acknowledged.

**Patient Data.** Any data about a patient or a consumer that is electronically filed in a participating organization or participating organization participant’s systems or repositories. The data may contain protected health information, personal credit information, and/or personally identifiable information.

**Person Record.** Any record in a Michigan Health Information Network Shared Services infrastructure service that primarily relates to a person.

**Pilot Activity.** The activities set forth in the applicable exhibit and typically includes sharing message content through early trials of a new use case that is still being defined and is still under development and which may include participating organization feedback to Michigan Health Information Network Shared Service to assist in finalizing a use case and use case and use case exhibit upon conclusion of the pilot activity.

**Promoting Interoperability.** Using certified electronic health record technology to improve quality, safety and efficiency of healthcare, and to reduce health disparities as further contemplated by Title XIII of the American Recovery and Reinvestment Act of 2009.

**Principal.** A person or a system utilizing a federated identity through a federated organization.

**Provider Community.** A healthcare provider with an active care relationship with the applicable patient.

**Public Health Agency.** Entities that have the legal authority to receive case reports on conditions of interest to them (Ex. Michigan Department of Health and Human Services).

**Query for Documents Message.** A message specific to the Query for Documents Web Services Interface Specification that references the Integrating the Healthcare Enterprise's Cross-Community Access specification.

**Reportability Response.** A message used to communicate the reportability of a case report.

**REST.** REST stands for Representational State Transfer, which is an architectural style, and an approach to communications that is often used in the development of web services.

**Retrieve Documents Message.** Retrieve documents web services interface specification that references the Integrating the Healthcare Enterprise's Cross-Community Access specification.

**Send/Receive/Find/Use (SRFU).** Means sending, receiving, finding, or using message content. Sending involves the transport of message content. Receiving involves accepting and possibly consuming or storing message content. Finding means querying to locate message content. Using means any use of the message content other than sending, receiving and finding. Examples of use include consuming into workflow, reporting, storing, or analysis. Send/Receive/Find/Use (SRFU) activities must comply with Applicable Laws & Standards or State Administrative Code as that term is defined in this agreement and the data sharing agreement.

**Service Interruption.** A party is unable to send, receive or find message content for any reason, including the failure of network equipment or software, scheduled or unscheduled maintenance, general Internet outages, and events of force majeure.

**SNOMED – CT.** Systemized Nomenclature of Medicine – Clinical Terms is a systematically organized computer processable collection of medical terms providing codes, terms, synonyms and definitions used in clinical documentation and reporting.

**SOAP.** SOAP originally defined as Simple Object Access Protocol is a lightweight protocol intended for exchanging structured information in a decentralized, distributed environment. It uses XML technologies to define an extensible messaging framework providing a message construct that can be exchanged over a variety of underlying protocols. The framework has been designed to be independent of any particular programming model and other implementation specific semantics. For the eHealth Exchange to be a truly scalable, secure and interoperable network, a common transport layer is essential. The messaging platform is based on SOAP 1.2 messages over Hypertext Transfer Protocol.

**Source System.** A computer system, such as an electronic health record system, at the participating organization, that sends, receives, finds or uses message content or notices.

**Specifications.** Specifications provide a standard set of service interfaces that enable the exchange of interoperable health information among the health information exchanges.

**Statewide Consumer Directory (SCD).** A Michigan Health Information Network Shared Services infrastructure service that helps organizations provide tools to consumers, which allow the consumers to manage how their personal Health Information can be shared and used. The Statewide Consumer Directory is essentially a Software Development Kit with a robust set of Application Programming Interfaces that can be used by consumer-facing applications that enable consumers to take an active role in viewing and editing their preferences for how their health information is shared.

**Target HIE.** The health information exchange or eHealth Exchange Node that the message or feedback is being addressed.

**The Sequoia Project.** An organization that manages the nationwide network formerly known as Nationwide Health Information Network now called eHealth Exchange, which uses a set of standards, services and policies that enable secure health information exchange over the Internet

**Transactional Basis.** The transmission of message content or a notice within a period of time of receiving message content or notice from a sending or receiving party as may be further set forth in a specific exhibit.

**Transitions of Care.** The movement of a patient from one setting of care (e.g., hospital, ambulatory primary care practice, ambulatory specialty care practice, long-term care, rehabilitation facility) to another setting of care and can include transfers within a healthcare organization.

**Trusted Data Sharing Organization (TDSO).** An organization that has signed any form of agreement with Michigan Health Information Network Shared Services for data sharing.

**Use Case.** (a) A use case agreement previously executed by a participating organization; or (b) the use case summary, use case exhibit and a use case implementation guide that participating organization or Trusted Data Sharing Organization must follow to share specific message content with the Michigan Health Information Network Shared Services.

**Use Case Exhibit.** The legal agreement attached as an exhibit to the master use case agreement that governs participation in any specific use case.

**Use Case Implementation Guide (UCIG).** The document providing technical specifications related to message content and transport of message content between participating organization, Michigan Health Information Network Shared Services, and other Trusted Data Sharing Organizations. Use case implementation guides are made available via URLs in exhibits.

**Use Case Summary.** The document providing the executive summary, business justification and value proposition of a use case. Use case summaries are provided by Michigan Health Information Network Shared Services (MiHIN) upon request and via the MiHIN website at [www.mihin.org](http://www.mihin.org).

**View Download Transmit (VDT).** A requirement for Promoting Interoperability with the objective to provide patients with the ability to view online, download and transmit their health information within a certain period of the information being available to an eligible professional.

**XCA.** The Integrating the Healthcare Enterprise® standard for Cross-Community Access which provides specifications to query and retrieve patient relevant health information held by other communities.

**XDS.b.** The Integrating the Healthcare Enterprise® standard for Cross-Enterprise Document Sharing revision b, which provides specifications to query and retrieve patient relevant healthcare data held within a community.
