

Social Determinants of Health - File

Version: 4.0.1

Last updated: August
22nd,
2024

File Name	<PO name>_sdoh_<YYYYMMDD>_<Version>.csv
File Format	It is important to remember that all columns in an SDOH file must include headers that exactly match the Data Elements below. All data is double quoted and comma separated. If the value has a double quote in it, then another double quote is used to escape it - a simple example of this is: "Name";"Age" = "a""b,c","12" Here we have the person's name is a"b,c - and their age is 12.
Directions	The SDOH file is to be submitted as a csv file to the organizations input folder on the Integrated Technology Platform. Folder subdirectory structure: Your OID -> SDOH -> input
Purpose	Participating organizations screen patients in the healthcare setting for social need identification. This data is submitted to the Health Information Network (HIN) and integrated with Active Care Relationship Services (ACRS)™ to allow for accurate person-care team relationships to be identified. Participation in the ACRS Use Case is prerequisite for submitting to the SDOH Use Case. This creates individual social need identifiers which can be shared among active care team members, and create the potential for a holistic understanding of the individual receiving care.
Inclusion Criteria	The Patient screening list may be provided by multiple practices within the participating organizations. The list will not be de-duplicated, meaning if a patient appears on the list from more than one organization, each patient screening should be included on this list; the result is there will be the potential for more than one screening for a given patient to be included in this file.
Submission Frequency	Monthly - it must be submitted at least once a month and can be submitted more frequently
Submission Mechanism	All connectivity, regardless of whether it is for SDOH Use Case (Social Needs Screening Data) Submitters or Receiver data flows are accomplished through the transfer of files via SFTP folder and confirmation of receipt. Submitters will upload files to the integrated technology platform through SFTP credentials established during the onboarding process. Hostname: sftp.mihin.services Port: 22
File Lifespan	Each monthly file will be a full refresh of the previous month's file. Patient screenings should not be resubmitted unless the specific screenings failed to load in the previous submission
